

Case Study: Albany Solar

OVERVIEW

Albany Solar was stuck with an old website with bad UX that doesn't drive conversion. They now have an optimised, modern and responsive website that has a great UX.

INDUSTRY

Residential, Commercial and Off-Grid Solar

DELIVERABLES

Website Design and Development

BACKGROUND STORY

Albany Solar is a complete renewable energy and hot water solution company providing a range of energy efficient electrical and plumbing solutions for home or business. They service The Great Southern, WA.

With more and more people searching on mobile devices the website upgrades for optimisation and content refresh.

The XEN Solar website development process is tailored from our experience with solar dealers. Our goal was to build a modern, responsive website that has a great UX.

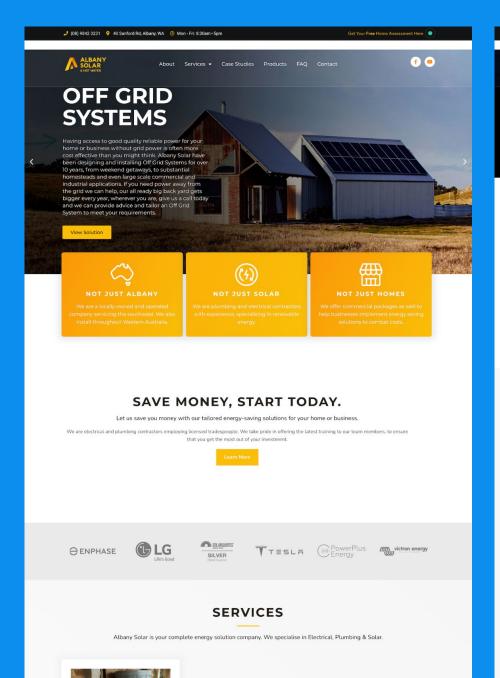

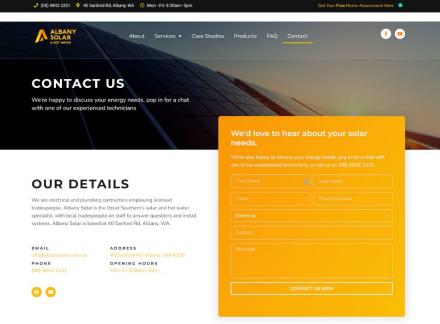

From our first dealings with XEN Solar we were relieved to have found a team that were efficient and able to take the lead with the construction of our new website.

The team were extremely patient and understanding and met our often difficult time schedules, to gain the input from both Directors.

It is rare to find a company who delivers exactly what they promise, on budget, it has been a pleasure to deal with the XEN Solar team.

EXAMPLES OF WORK

MEET THE TEAM

NEIL HOWITT

Founder

Neil, alongside his partner Justine, is the owner of Albany Solar. He is also the electrical contractor (Howitt Electrical EC009265) with over 20 years electrical experience in the UK and Australia. His passion is renewable energy and providing his customer with the best stock on the market. Outside of work, he likes to go exploring the Australian wilderness (and quite often eets lost tool).

JUSTINE CANNING

Co-Founder

Justine, alongside her partner Neil, is the owner of Albany Solar. Justine liaises with customers and takes care of the accounts side of the business.
