

Case Study: Solar Powered Homes

OVERVIEW

Solar Powered Homes was stuck with outdated and non-relevant content on their website. **XEN Solar** has the right skills to solve the problem.

INDUSTRY

Residential and Commercial Solar

DELIVERABLES

Website Content Updates

BACKGROUND STORY

Solar Powered Homes are a local company servicing Coffs Harbour, with over 30 years electrical experience. 15 of those years have been dedicated to designing and installing local business and residential Solar PV systems.

The goal was to update the content on their WordPress website to showcase quality products, service and support for their customers.

The XEN Solar website content update process is tailored to suit the needs of each solar dealer. Our goal was to help Solar PH update content that reflects current product and service offerings.

The XEN Solar team did a great job updating our website. As none of us have any website knowledge, we needed a trusted company to update our products.

The XEN Solar team managed to visualise my expectations to the point, and the outcome was actually better than expected!

FAQ's

Our Technology

Solar Powered Homes Coffs Harbour

Solar Powered Homes has a range of products and services that address both our business and residential clients desire to improve their green credentials by reducing their greenhouse gas production and well as save money on energy. These include Energy Auditing, Grid Connect Solar PV (with or without Hybrid – Battery Storage), Stand Alone Power, PV solar system monitoring, Solar Hot Water and heat pumps, Pre-Paid Metering, Energy Management and Light Emitting Diode (LED) lighting.

We are a local company with over 30 years electrical experience, 15 of those years have been dedicated to designing and installing local business and residential Solar PV systems.

Our focus is on addressing our customer's needs with individually designed solutions providing only the highest quality products, service and support through the entire process.

"The guys from Solar Powered Homes were dedicated to getting our 6kW system right and this included establishing an automatic backup system with our large Perkins generator. We are completely off grid and rely on our system to be operational without fail for our offices and home and we moved onto this property in April 2014. Since the installation, Brett..."
